Digital processing of
incoming delivery notes
in SAP

Transparency

- » Original delivery note with one click on the material document

Process Acceleration

- » Omission of paper filing by electronic archiving
- » Fast document access for all parties involved

Your Benefit

Savings

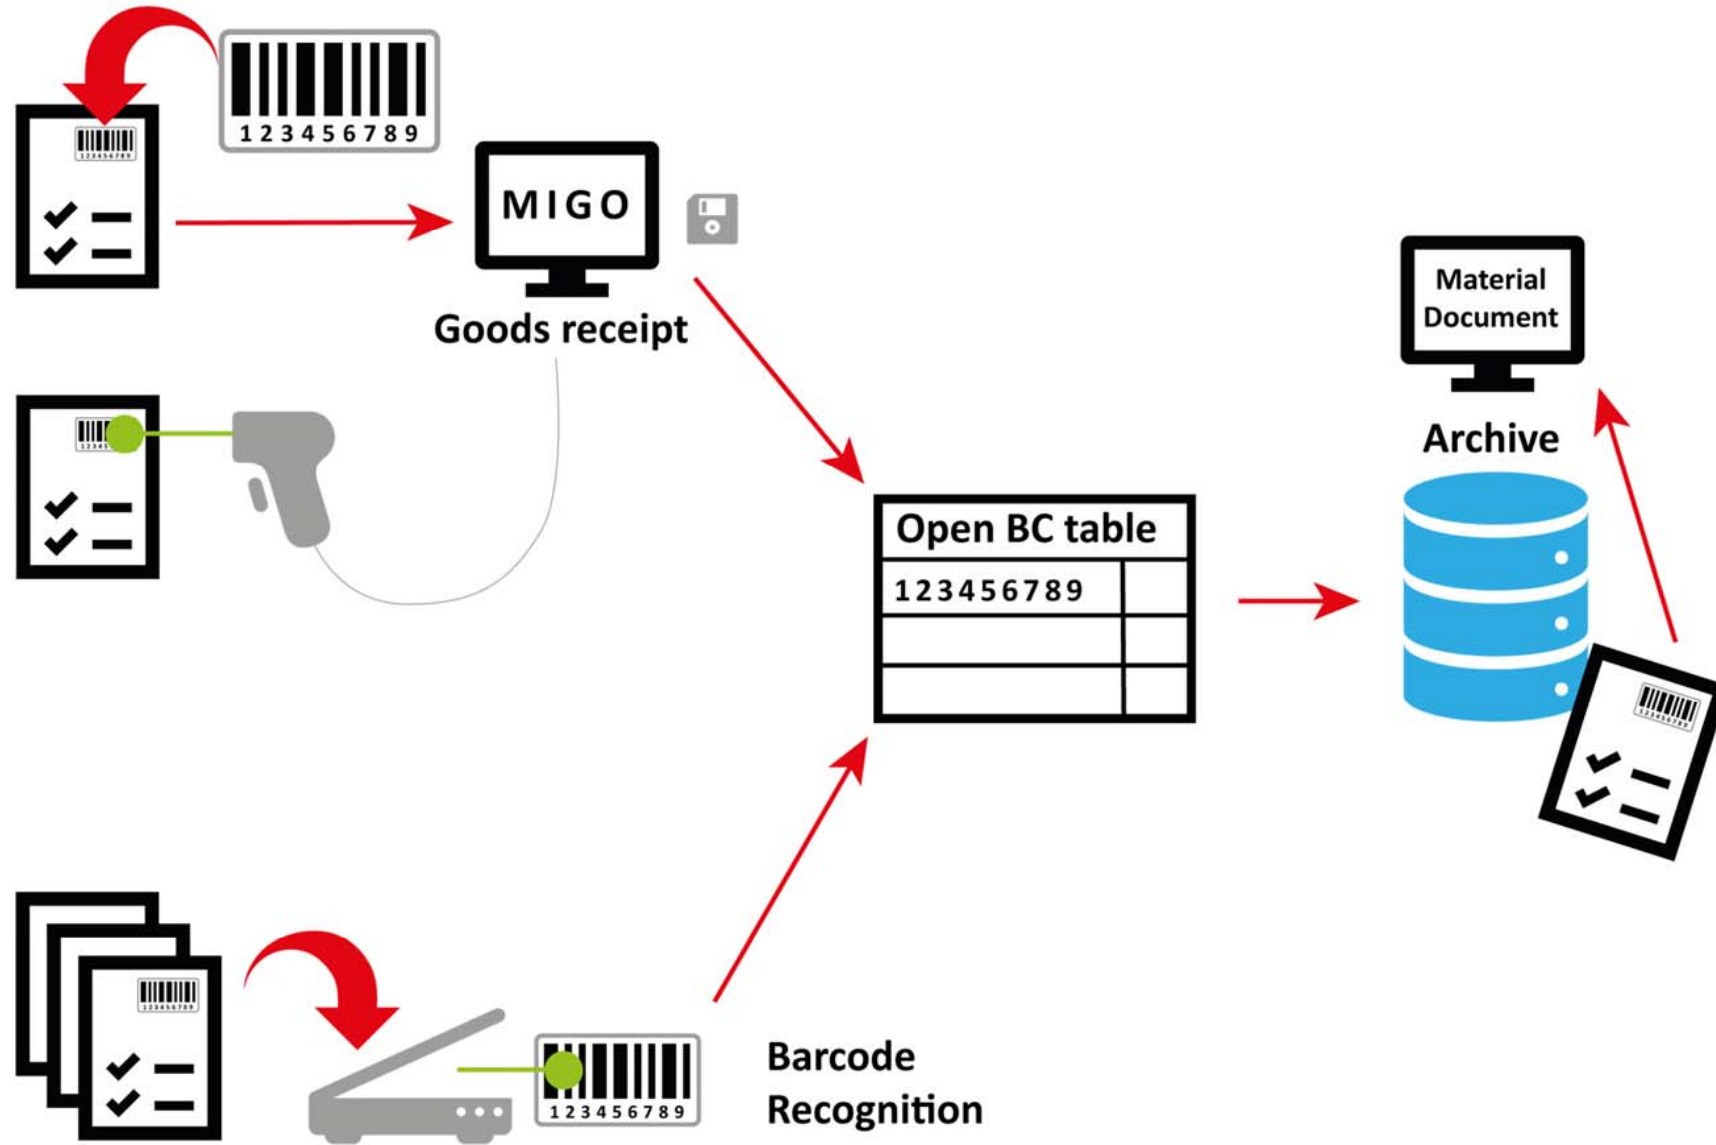

- » Reduction of manual research efforts
- » No manual/paper-based filing

Quality/Compliance

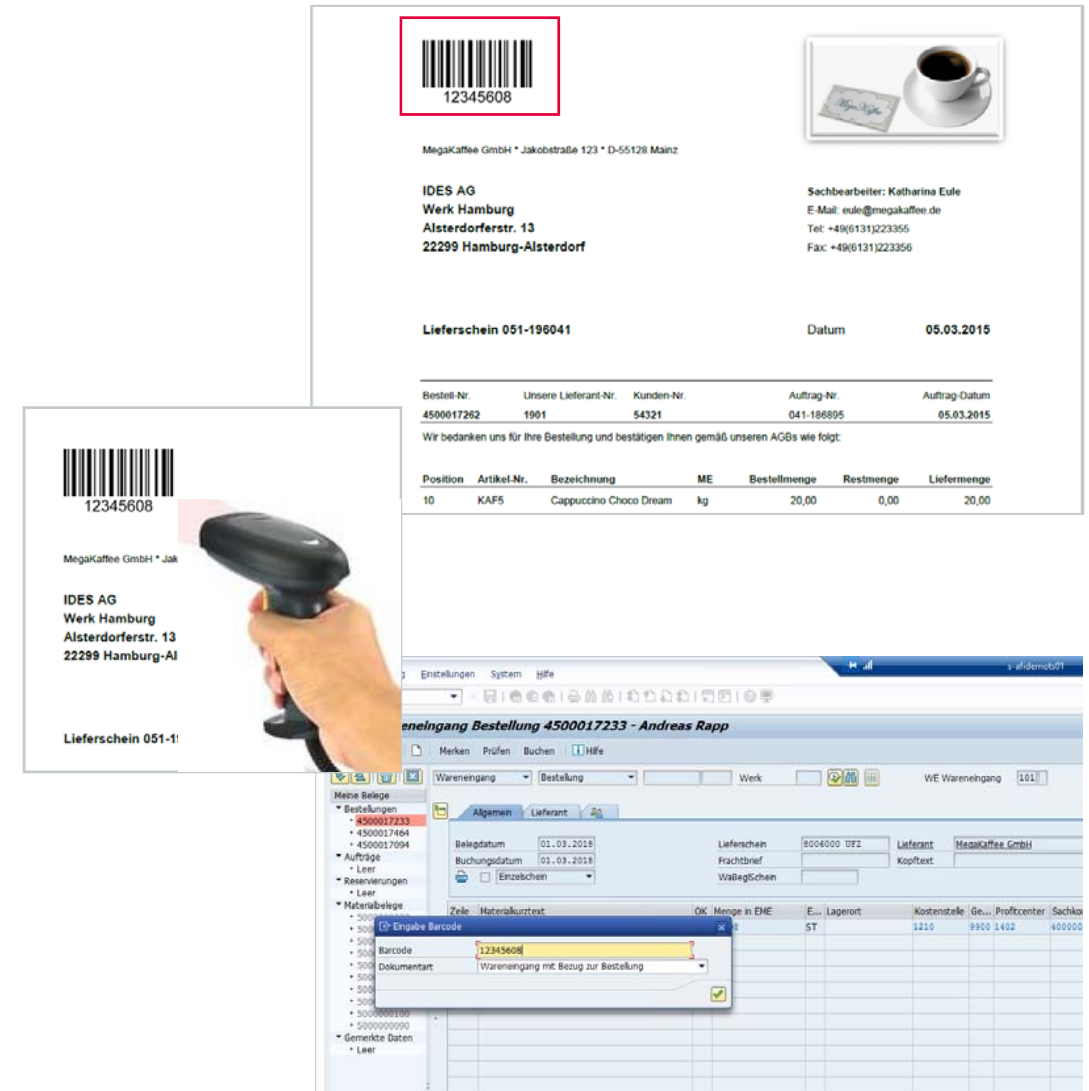

- » Process standardization/safety
- » Error minimization

Process Description

- » When saving the material document, a pop-up window with a barcode number request appears automatically. The employee responsible for goods receipt takes a barcode sticker provided and attaches it to the delivery note.
- » The barcode can now be conveniently transferred from goods receipt to the SAP pop-up window by using a hand scanner. **There is no longer a risk of typing errors by manual input!**
- » All delivery notes processed in this way are collected, e.g. over the working day or the working week.
- » The batch of all collected delivery notes is then scanned, digitized, archived and processed using a barcode connector.

» The barcode number entered in the pop-up window and referring to the unique SAP object »Goods Posting« is stored in the SAP transaction OAM1 as an internal barcode and waits for a match with an external barcode number.

» When external and internal barcode numbers match, the document is linked to the SAP object »Goods Posting«.
